

TRAFFIC DATA LOGGER

The traffic data logger is working with a 8 Gb memory card. The stored file converts to .csv format and it can be opened by web app software.

The file is containing date (day/moth/year), time (hour, minute, second) and speed data.

	A	B	C

USB key downloading

- Please insert the USB key into the data logger directly or any external USB connector (if it is provided, if not please open the case and insert the internal USB connector)
- Please wait approx. 2 minutes and after that time USB key can be taken away.
(a white led will lighth when the procedure is running, when it releases please take away the USB key.)

ATTENTION!

1. Never delete the "datalog.txt" file on USB key (otherwise the datas will not be downloaded to USB key) This is a filename which has to be used if you want to download the files from data logger.
If 'datalog.txt' file is not available the datas will not be downloaded.
2. After using files please delete all file from USB key (except the datalog file!)
3. Deleting datas on data logger: If usb key includes 'ddat', in this case all data will be deleted on data logger.
4. Data logger file name: radarxxx_radar-data.zip

Please note the followings:

Please visit www.itrafficdata.com website and upload your datas from the pendrive. It is always zip file. After that all datas can be evaluated by the software.

**Username: udem
Password: udem01**

Please insert the USB key when the datas are downloaded ONLY!
